## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-17 and 36-42, drawn to a device for the formation of advanced oxidation product, classified in class 422, subclass 186+.
  - II. Claims 18-32 and 48-53, drawn to a photohydroionization cell, classified in class 422, subclass 186+.
  - III. Claims 33-35, drawn to a mixture of compounds, classified in class 106, subclass 1.05+.
  - IV. Claims 43-47, drawn to a method for forming advanced oxidation product, classified in class 204, subclass 157.15+.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different designs.
- 3. Inventions of Group IV and either of Group I or II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially

Art Unit: 1795

different process. (MPEP § 806.05(e)). In this case the method as claimed can be

practiced with an apparatus wherein a catalytic target structure is not mechanically

coupled to a UV light source.

4. Inventions of Groups III and IV are related as product and process of use. The

inventions can be shown to be distinct if either or both of the following can be shown: (1)

the process for using the product as claimed can be practiced with another materially

different product or (2) the product as claimed can be used in a materially different

process of using that product. See MPEP § 806.05(h). In the instant case the process for

using the product as claimed can be practiced with a product containing photocataylst such

as ZnO.

5. Inventions of either Group I or II and Group III are directed to related products.

The related inventions are distinct if the (1) the inventions as claimed are either not

capable of use together or can have a materially different design, mode of operation,

function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive;

and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the

instant case, the inventions as claimed they have different effect. Furthermore, the

inventions as claimed do not encompass overlapping subject matter and there is nothing of

record to show them to be obvious variants.

6. Because these inventions are independent or distinct for the reasons given above

and there would be a serious burden on the examiner if restriction is not required because

the inventions require a different field of search (see MPEP § 808.02), restriction for

examination purposes as indicated is proper.

7. A telephone call was made to Attorney Joseph Englander on 27 November 2007 to

request an oral election to the above restriction requirement, but did not result in an

election being made.

Applicant is advised that the reply to this requirement to be complete must include

(i) an election of a species or invention to be examined even though the requirement be

traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected

invention.

The election of an invention or species may be made with or without traverse. To

reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the

election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not

patentably distinct, applicant should submit evidence or identify such evidence now of

record showing the inventions or species to be obvious variants or clearly admit on the

record that this is the case. In either instance, if the examiner finds one of the inventions

Page 5

Application/Control Number:

10/784,867

Art Unit: 1795

unpatentable over the prior art, the evidence or admission may be used in a rejection

under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected

invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or

more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a

request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

9. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Kishor Mayekar whose telephone number is (571) 272-

1339. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Nam Nguyen can be reached on (571) 272-1342. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published

applications may be obtained from either Private PAIR or Public PAIR. Status information

for unpublished applications is available through Private PAIR only. For more information

about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on
